# MANUFACTURER

## USH SINCE 1976

USH is a company created in 1976. The factory is located in the heart of Germany, close to major German industrial centers of the Ruhr. It has a strong metallurgical experience and from the beginning USH has been specializing in the manufacture of tools for "power-driven tools".

Today USH has become one of the largest bit holder producers in Europe, known for their reliability and strength. The company has developed many models of screwdriver bits and other accessories such as screw extractors and carbide scribers.

USH manufactures its complete range in Germany with special care to create and develop high quality tools.

USH supports customers with a complete product offer, through marketing and merchandising concept suitable for all retail situations.

# SCREW BITS

## TOP QUALITY

### TORSION GEOMETRY

#### LONG LIFE GARANTY

The **torsion bit is excellently** suited for cushioning load peaks. If, for instance, the screw head makes contact with a solid metal surface, a torsion bit will master this situation without any problem. The load peak is cushioned by the torsion zone, thereby avoiding permanent distortion or deformation of the bit point.

**This guarantees a longer tool life.** Furthermore, the risk that the bit slips out of the screw head is significantly reduced, and premature wear as well as damage to the workpiece is avoided. **In general, "soft" screw fastening** relates to timber, where fastening starts by applying little force which is then steadily and uniformly increased. The more threads there are, the greater the force that must be applied. The same applies to plastic, to which, however, in view of the diversity of materials, general rules cannot be applied. Therefore, a standard bit is generally sufficient. Breaking of the bit point due to sudden load peaks must not be feared. If in "soft applications" the service life has to be increased, greater hardness is more important than the tenacity of the bit. A higher hardness reduces the wear of the bit in the areas where it is attacked, i.e. rounding of edges and indentations in the areas of wear are significantly reduced.

**Hard screw fastening** relates to the fastening of screws with a metric thread in a solid metal piece but also in sheet metal. The flat underside of the screw head comes into contact with the flat, non-elastic surface of the solid metal piece which results in a sudden load peak. Due to the low torque, which is required for fastening a screw, the different forces, which come into effect are extreme. Another case of "hard" fastening relates to self-tapping screws fastened in a solid metal piece but also in sheet metal. Also in this case, a sudden load peak occurs, but the difference of forces that act on the components is not as extreme as in the application described above. In this case, the advantage of the higher torque, which can be transmitted by the torsion bit, plays an important role.

Furthermore, **torsion bits are superior** to standard bits when screws are to be fastened into layers of materials with different degrees of hardness, where alternating loads, which are similar to load peaks are encountered.

# HIGH SPEED COLD FORGING

## HIGH PRECISION

USH uses the self developed **High-Speed-Cold-Forging** process for the manufacturing of screwdrivers. The bit is given its shape by means of cold forging. That manufacturing process gives the bits high precision, greater mechanical strength and a very clean surface condition.

## ISOTIN®

### TOP HARDNESS

With a double titanium layer a surface hardness of 3,000 Vickers is obtained in the case of ISOTIN® bits (standard TIN bit approx. 2,500 Vickers). By an optimised multi-stage hardening and tempering process under vacuum, the bit achieves a core toughness, which is demonstrated by the torque which is up to 120% higher than that of uncoated bits (compared to a Ph 2 bit as per DIN standard). Optimised core toughness and a thicker wearing coat **give a longer tool life** than that of a TIN bit with standard coating. As a result of the torsional shape, the bit is suitable **for all delicate applications** in both hard and soft materials.

## DIATIN®

### THE PERFECT GRIP

DiaTin bit is in effect a torsion bit provided with a TiN (titanium nitride) coating. An additional DLC (**diamond like carbon**) coating is applied to the TiN coating.

This special coating in the engaging area of the tip ensures a high degree of grip between the bit and the screw which clearly **reduces the cam-out value**.

In combination with the torsion form, the bit is suitable for challenging applications for both hard and soft screw fastening.

screw

# BITHOLDER

## TOP QUALITY

### BIG II

### HIGHLY EFFICIENT

#### **Firm connection between the screw and the magnetic holder.**

Screw fastening becomes highly efficient, as the screw is firmly held.

Insert the bit, the bit is held on the magnet and is retained.

Actuate the guide sleeve until the annular magnet is in contact with the screw head; almost any bit dimension can be used (Ph / Pz / Torx®).

The surface of the screw head is held on the annular magnet incorporated in the sleeve.

The screw is safely held and tilting or slipping is almost impossible.

The screw has virtually become one with the magnetic holder.

The screw is retained on the BiG magnetic holder with a force of more than 1 kg.

# FOX II

## FASTER

### Quick change in one-hand operation.

Fox II bitholder allows the insertion of the bit without retracting the sleeve.

In order to remove the bit, the sleeve is slightly pulled backwards, and the bit will "jump" out of the holder and can be taken out without any effort.

Thus, FoX II enables rapid bit change in one-hand operation. With the aid of the neodymium magnet and a retaining pin a safe clamping is achieved. As a result the bit is "locked" in the holder and unintentional slipping out or becoming jammed in the screw is prevented.

# BIG & BIG MINI

## SCREW DEEP ADJUSTMENT

Ideal for: Joinery and carpentry, door and window installation, interior works (sandwich type plaster boards and hard particle boards).

# SPACER

## STOPVIS

The spacer ring and deep adjustment limit the penetration of the screw in the material.

Screw is perfectly in line with the material which is not damaged for a perfect finish.

# DIATIN®

## SUPERIOR QUALITY

ABSOLUTE  
PROFESSIONAL  
QUALITY!

### Features

- The DiaTiN coating is a combination of TiN coating with DLC (Diamond Like Carbon).
- Double titanium layer.
- Surface hardness of 3,000 Vickers (standard TiN bit approx. 2,500 Vickers).
- Torsion geometry.
- Quick lock attachment.
- Rust proof protection.

TORSION FLEX

### Benefits

- DLC coating improves wear resistance and lengthens the life of the bit.
- It also ensures perfect holding between bit and screw, thus keeping the bit from slipping and protecting screw heads.
- It reduces the force required for implementation.
- Higher torsion resistance.
- Greater speed of implementation on the job.
- Quick lock attachment for optimum holding in the chuck.
- The torsion geometry combined with the TiN coating increases the resistance to tightening torque.
- Fully compatible with PL, PH, PZ, TX type screw.

# ISOTIN®

## TOP QUALITY

OPTIMUM  
SOLUTION FOR  
INDUSTRIAL  
APPLICATIONS

### Features

- Double titanium layer.
- Surface hardness of 3,000 Vickers (standard TIN bit approx. 2,500 Vickers).
- Optimised core toughness and a thicker wearing coat give a longer tool life than that of a TIN bit with standard coating.
- Torsion geometry.
- Quick lock attachment.
- Optimum corrosion protection

### Benefits

- As a result of the torsional shape, the bit is suitable for all delicate applications in both hard and soft materials.
- ISOTIN® bits for screw fastening series.
- The double titanium cover prevents corrosion and ensures high surface hardness.
- Quick lock attachment for optimum holding in the chuck.
- The torsion geometry combined with the ISOTIN® coating increases the resistance to tightening torque.
- Fully compatible with PL, PH, PZ, TX type screw.

# QUALITY INDUSTRY SPECIFIC SCREW BITS

5/16"  
HEX SHANK

## Features

- 5/16" hex shank.
- Standard DIN hardness.
- Rust proof protection.

## Benefits

- Suitable for D8 bitholder or machines.
- Fully compatible with PZ, PH, TX, HEX, SL type screw.

# INDUSTRY SPECIFIC SCREW BITS

USH,  
SCREW BITS  
SPECIALIST  
OFFERS A  
FULL RANGE  
OF SPECIFIC  
SHANK

## Features

- Compatible with 7 mm Fein, M5, M6, UNF 10/32", Bosch shank.
- High quality steel.
- Standard DIN hardness.
- Rust proof protection.

## Benefits

- Suitable for D8 bitholder or machines.
- Ideal for difficult screw fastenings.
- Fully compatible with PZ, PH, TX, SL type screw.

## MORE THAN 1,000 SPECIAL TOOLS FOR OUR CUSTOMER

Standards are the basis for many companies. Simultaneously, special tools are developed, produced and marketed. The same applies to USH, as very often special makes offer solutions for a broad range of users. In the past five years, USH have devised more than 1,000 special tools for their customers, based on a drawing or a sample. To us it is important that the user receives the right tool in the right moment at the right place. And all this without any compromise with respect to quality.

# STAINLESS STEEL

## TOP QUALITY

RUST  
DOESN'T  
STAND A  
CHANCE

### Features

- Stainless steel.
- Quick lock attachment.
- Optimum corrosion protection.

### Benefits

- No risk of external rust.
- External rust on stainless steel is the result of abrasion when tightening screws using ordinary steel tools. The material which wears off such tools comprises steel particles which adhere to the screws and are transformed, in the presence of oxygen, into rust. The use of stainless steel bits prevents the formation of external rust on stainless steel screws or stainless steel surfaces.
- Quick lock attachment for optimum holding in the chuck.
  - Fully compatible with PZ, PH, T, SL type screw.

# BITHOLDER INDUSTRY

**STRONG  
RESISTANCE  
TO TORSION**

**EXCELLENT  
CONCENTRICITY**

## Features

- Cold forging process.
- High grade Stainless steel (according to DIN 7427).
- Bit holding ring (according to model).
- Magnetic or non magnetic according to needs.

## Benefits

- Compatible with 1/4" Hex, 5/16" Desoutter, 7 mm Fein, 5,5 mm Bosch, 10 mm SDS-PLUS shanks.
- Magnetic option allows to hold the screws.
- Ring option allows to hold strongly the screw bits.
- Quick lock option.
- Ideal for hard-to-reach areas, with longer lengths (up to 250mm).

COMPATIBLE

10 mm SDS-PLUS

## FORGING TECHNOLOGY

Using the cold forging process which we developed ourselves, standard bitholders are manufactured fully automatically. Firstly, the stainless steel sleeves and the drive sections made from high-grade tool steel are connected.

By applying this process, a positive high-quality and inseparable connection of both components is achieved. In this working step, the material on the drive side is compacted. This leads to an **increase in the strength**, which is responsible for the **long service life** of the magnetic bitholders.

This process **guarantees excellent concentricity**. In the next step, the inner profiles of our bitholders are prepared, also using the cold forging process. In this step, the material is formed around a mandrel. This method allows us to produce a large range of shapes, thanks to the high level of flexibility in matching changing geometries. By the next compacting step the required increase in strength at the output is achieved.

# BITHOLDER BIG II

SCREW  
FIRMLY HELD  
ON THE BIT  
THANKS TO  
ADDITIONAL  
RING MAGNET

## Features

- Automatic adjustable magnet.
- Double permanent magnets at the bottom and exit of the bit holder (ring magnet).
- Quick lock system to hold all standard bits.
- Cold forging process.

## Benefits

- Effective holding of screws with powerful magnets.
- Ideal for long screws.
- Ideal for horizontal and vertical work alike.
- Quick ejection and rapid bit change.
- Very high torsion resistance.
- Quick and precise manipulation with just one hand.
- Quick lock attachment for optimum holding in the chuck.

## BIG & BIG MINI

IDEAL FOR  
PLASTER  
BOARDS

### Features

- Permanent magnet.
- Deep adjustable system.
- Cold forging process.

### Benefits

- Screw deep adjustment according to the job.
- Ideal for: Joinery and carpentry, door and window installation, interior works (sandwich type plaster boards and hard particle boards).
- Effective holding of screws with powerful magnets.
- Ideal for long screws.
- Quick lock attachment for optimum holding in the chuck.
- BIG is suitable with PH2, PH3, PZ2, PZ3, T 15 to 30.
- BIG Mini is suitable with PH1, PZ1, T10".

# SOCKET

## SURFACE PROTECTION POWER IMPACT

**SPECIAL FOR  
PLASTIC  
COATING OR  
STAINLESS  
STEEL  
SCREWS**

### Features

- Quick-lock attachment.
- Mechanical screw holding system (ball/spring).

### Benefits

- Specially adapted for screws used for fastening fronts or sandwich panels and self-drilling screws.
- The system that holds the screw head in the socket is specially designed for working with painted or plastic finishes.
- Quick lock attachment for optimum holding in the chuck.

**1/4"** - E 6,3

# SCREWDRIVER FOR BITS

## THE COMPLETE TOOL

ALL-IN-ONE

### Features

- Ratchet function.
- Telescope shank.
- Magazine screwdriver with 8 bits.
- Ergonomic handle.

### Benefits

- Clockwise rotation, anticlockwise rotation.
- Adjustment of the length 192-267 mm - with a firm interlock.
- 8 bits: Ph 1, Ph 2, Pz 1, Pz 2, Torx T 15, T 20, T 25, T 30.
